

TUBERCULOSIS TESTING

The Yolo County Board of Education and the Yolo County Office of Education recognize that tuberculosis poses a public health threat. Treatment of active cases of this disease is the most effective means of controlling its spread.

The number of tuberculosis cases in our county is on the rise. The County Public Health Officer therefore requires tuberculosis testing, and follow-up if appropriate, before students enter school.

The Yolo County Superintendent of Schools or designee may require a tuberculosis skin test when qualified medical personnel reasonably suspect that a student has active tuberculosis. If there is an outbreak of tuberculosis at any school, the County Superintendent or designee may require all students at the school to undergo tuberculosis skin tests.

Students known to have had a positive tuberculosis skin test shall be excluded from school until they provide evidence of a follow-up x-ray and appropriate medical care or are no longer suspected of having active tuberculosis.

(cf. 5112.2 - Exclusions from Attendance)
(cf. 5141.3 - Health Examinations)

All County Office staff shall receive information on how tuberculosis is spread and how it can be prevented and treated.

(cf. 4119.43/4219.43/4319.43 - Universal Precautions)
(cf. 5141.22 - Infectious Diseases)

TUBERCULOSIS TESTING

The following protocol shall be followed for any student who has a positive TB skin test:

1. The parent/guardian must provide the school with the results of a chest x-ray before the student enters class. If no x-ray has been done, the parent/guardian shall be given a TB follow-up form to take to his/her personal physician or to the county public health office. The student must then obtain a chest x-ray and bring proof that the film was taken for school entry.
2. If the TB form is not returned with x-ray results within two weeks, the Yolo County Superintendent of Schools or designee shall contact the student and family for information about the x-ray report.
3. If the student is found to have active infectious tuberculosis on chest x-ray and sputum tests, the student shall not be admitted to school until a physician's note is presented, showing that the student is free of communicable tuberculosis. (Health and Safety Code 121485, 121495)
4. If the x-ray is negative and the student admitted, the County Superintendent or designee may contact the student and family again in four to six weeks to determine that they have followed through with a medical appointment for the INH preventive medication program, if indicated.
